

WHAT IS CLAIMED IS:

1. An image forming apparatus that performs printing based on data sent from an external terminal device via a network, comprising:
- 5 a non-volatile memory which stores processing status information of print jobs;
- determining means for determining, when the image forming apparatus has been restored to its normal state, whether there are any jobs remaining to be printed based on
- 10 the print job processing status information stored in the non-volatile memory; and
- resend request issuing means for requesting a terminal device that sent data of an outstanding print job to resend the data when it is determined by the determining
- 15 means that the outstanding print job exists.

2. An image forming apparatus as claimed in Claim 1, wherein said restoration in the determining means is a power restoration after a shutdown .

20

3. An image forming apparatus as claimed in Claim 1, further comprising:
- job identification information supply means for providing job identification information to each print job
- 25 data sent from the external terminal device.

**BEST AVAILABLE COPY**

4. An image forming apparatus as claimed in Claim 3,  
wherein said resend request issuing means requests  
to resend the data based on the job identification information  
of the outstanding print job.

5

5. An image forming apparatus as claimed in Claim 3,  
wherein said non-volatile memory stores the job  
identification information with a terminal device identifier  
which send data of the job.

10

6. An image forming apparatus as claimed in Claim 1,  
wherein said data includes an information of print  
request and a print data.

15 7. A terminal device that sends data to an image forming  
apparatus connected to it via a network to cause the apparatus  
to perform printing, comprising:

receiving means for receiving a data resend request  
sent from the image forming apparatus when the image forming  
20 apparatus has been restored to its normal state; and  
data resend means for resending the data in  
response to the resend request.

8. A terminal device as claimed in Claim 7,  
25 wherein said receiving means receives a job  
identification information with the resend request, and said

data resend means resend the data corresponding to the job identification information.

9. An image forming system in which an image forming  
5 apparatus and a terminal device are connected via a network  
and the image forming apparatus executes printing based on  
data sent from the terminal device, comprising:  
said image forming apparatus including,  
a non-volatile memory which stores the print job  
10 processing status,  
determining means for determining, when the image  
forming apparatus has been restored to its normal state,  
whether or not there are any jobs remaining to be printed based  
on the processing status information stored in the memory,  
15 and  
transmitting means for sending resend request  
information to request the terminal device that sent the data  
of an outstanding print job to resend it when it is determined  
by the determining means that the outstanding print job  
20 exists; and  
said terminal device including,  
receiving means for receiving the resend request  
information sent from the image forming apparatus, and  
data resend means for resending said data in  
25 response to the receipt of said resend request information.

10. An image forming system as claimed in Claim 9,  
wherein said restoration in the determining means  
is a power restoration after a shutdown .

5 11. An image forming system as claimed in Claim 9, said  
image forming apparatus further comprising:

job identification information supply means for  
providing job identification information to each print job  
data sent from the external terminal device.

10

12. A image forming system as claimed in Claim 11,  
wherein said receiving means receives a job  
identification information with the resend request, and said  
data resend means resend the data corresponding to the job  
15 identification information.

13. A print resume method for an image forming apparatus  
to perform printing based on data sent from an external  
terminal device connected to it via a network, comprising the  
20 steps of:

storing the print job processing status in a  
non-volatile memory;

determining, when the image forming apparatus has  
been restored to its normal state, whether or not there are  
25 any jobs remaining to be printed based on the processing  
status information stored in the memory;

**BEST AVAILABLE COPY**

requesting the terminal device that sent said  
print job data to resend it when it is determined by said  
determining means that there are print jobs remaining to be  
printed; and

5           resuming printing based on the resended data sent  
from the terminal device.

---

14.           A data sending method for the terminal device to  
send data to the image forming apparatus connected to it via  
10 a network and cause it to perform printing, comprising the  
steps of:

          sending print data to the image forming apparatus;  
          receiving a print data resend request sent from the  
image forming apparatus when the image forming apparatus has  
15 been restored to its normal state; and

          resending the print data in response to said  
resend request.

---

*short at*  
20 15.           A print data transmission method for an image forming  
system in which an image forming apparatus and a terminal  
device are connected via a network, and printing is performed  
by said image forming apparatus based on print data sent from  
said terminal device, comprising the steps of:

          said image forming apparatus including the steps  
25 of,

**BEST AVAILABLE COPY**

storing the print job processing status in a  
non-volatile memory,

determining, when the image forming apparatus has  
been restored to its normal state, whether or not there are  
5 any jobs remaining to be printed based on the processing  
status information stored in the memory, and

sending resend request information requesting  
that the terminal device that sent said print job data to  
resend it when it is determined that there are print jobs  
10 remaining to be printed; and

said terminal device including the steps of,  
receiving the print data resend request  
information sent from the image forming apparatus, and  
resending the print data in response to the  
15 receipt of said resend request information.
